

Planning C2 System Implementation

Introducing C2 systems requires more than IT skills

At the initial stage of considering a C2 system, our professionals can help you gain a true understanding of what is required for successful implementation, discover any potential challenges and recognise any organisational or process changes that may be necessary

Understanding the complexity of implementing a C2 System

- A C2 project does not end with software acquisition
- Implementing a C2 System requires many considerations:
 - Change Management will be required
 - Organisational restructuring might be needed
 - Procedures and processes will be changed
 - Infrastructure and other technical aspects must be analysed
 - Competences must be updated
- A C2 project must be carefully managed throughout the entire lifecycle – from purchase through to adaptation and into deployment – in order to maximise the benefits

Advanced planning gives better results

- Gain an understanding of what it requires to successfully implement a C2 solution within an Army environment
- Establish and assess the actions to take and challenges to overcome in order to facilitate a successful deployment
- Ascertain any specific organisational and process changes required to achieve a successful C2 implementation
- Create an implementation plan that address the identified actions and challenges

Service Content

- The service is delivered as a two day workshop carried out at the customer's premises
- Based on the discussions at the workshop a report will be delivered that focuses on the identified challenges and suggestions for addressing these
- Optimum value will be gained when customer attendees include a Project Manager, Operational User(s), a Purchasing Officer and where possible the IT Infrastructure Manager
- A follow up meeting will be conducted where the content of the report will be discussed and clarified

Work with skilled C2 professionals

- The 2 day workshop will be conducted by an experienced Project Manager and a Software Architect/Domain Expert
- Optimum value will be gained when customer attendees include a Project Manager, Operational User(s), a Purchasing Officer and where possible the IT Infrastructure Manager

Simplicity Trust Performance Forward-thinking

About Systematic

Systematic is an internationally renowned software company with over 450 highly qualified employees. We provide scalable software products, services and projects for defence forces, security organisations and systems integrators. With offices in Denmark, Finland, UK and USA, we are delivering solutions globally to over 40 countries and more than 100,000 users worldwide.

Our ability to simplify critical decision making is based on our core competences within information management, application integration and interoperability. We focus on quality and process maturity. The maturity of Systematic and the quality of our software are of the highest standard, which is demonstrated by our CMMI Level 5-certification.
