

SitaWare Battle Lab

Effective Through Life Capability Management

With so much invested in a C2 system, it is important that your SitaWare suite remains up-to-date, well maintained and ready for any future development activities. SitaWare Battle Lab is a through life capability management service for your existing Systematic C2 products, which is established alongside your operational SitaWare suite

Keep your C2 system optimised throughout its life cycle

- SitaWare Battle Lab ensures that your C2 system remains optimised throughout its lifecycle and is fully prepared for future development activities
- The service helps you to define operational procedures, examine different configurations of software and equipment, create specifications for future system development, and test prototypes/ beta versions before introducing changes to your existing C2 system, thereby reducing risk
- It enables you to understand capabilities and limitations of existing and future system components
- The SitaWare Battle Lab is ideal for establishing a realistic training environment
- It is also ideal for interoperability exercises, internal field trials, or to test mission-specific scenarios, where you can assess the configuration's suitability and gain valuable knowledge without affecting your existing C2 system

Systematic Battle Lab – Basic principles

- Full confidentiality between the parties
- Located at the customer's premises and with the customer providing the environment, necessary hardware and infrastructure, and access to operational assets
- Systematic offers in all its experience and competence to the benefit of the Systematic Battle Lab customer
- The need for close regular cooperation between Systematic's engineers and domain experts and the customer, including end users

Specific content

- Systematic SitaWare and IRIS products procured by the customer form the basis for the work in Battle Lab
- Access to consultancy support on various issues
- Early information on product roadmaps and development plans
- The ability to try other Systematic products, prototypes and beta versions for free for a limited period of time
- Hotline support on the products and the specific installation
- Continuous evaluation of progress and outcome

Battle Lab – Possible outputs

- Better planned and structured life cycle management
- Better understanding and planning of future investments
- New standard operating procedures
- Training material and training requirements
- Technical specifications for further development and new procurements
- Integration specifications and test results (new equipment)
- Proof of concept reports. Specific configurations of equipment
- Realistic time tables for rollout, training etc.
- Knowledge transfer from the supplier to the end user

Simplicity Trust Performance Forward-thinking

About Systematic

Systematic is an internationally renowned software company with over 450 highly qualified employees. We provide scalable software products, services and projects for defence forces, security organisations and systems integrators. With offices in Denmark, Finland, UK and USA, we are delivering solutions globally to over 40 countries and more than 100,000 users worldwide.

Our ability to simplify critical decision making is based on our core competences within information management, application integration and interoperability. We focus on quality and process maturity. The maturity of Systematic and the quality of our software are of the highest standard, which is demonstrated by our CMMI Level 5-certification.
